
Light-cone ball, unbinned supernovae, axis opposite to the CatWISE excess
Observer sector $\vartheta_{\rm obs}$ [deg]
Present time t_0
$\chi^2 - \chi^2_{\Lambda\rm CDM}$ (38 CC + 1579 SN, unbinned; $\alpha_{\rm high}$ fitted)
$\alpha_{\rm high} = 0.32$
$\alpha_{\rm high} = 0.34$
$\alpha_{\rm high} = 0.36$
$\alpha_{\rm high} = 0.38$
+0.5
+1.0
+0.0
CC + SN: 68% region
fitted $\alpha_{\rm high}$
CC + SN + CatWISE: 68% and 95%
Quaia slices: best fit
all compatible within 1σ
CatWISE excess within 1σ
Quaia slices within 1σ
CC + SN minimum ($\Delta\chi^2 = -1.19$)
CC + SN + CatWISE minimum
