
Light-cone ball around the observer, $\alpha_{\rm high}$ fitted at every point; white: χ^2 above its joint minimum
CatWISE dipole excess ($\pm1\sigma$) at the fitted $\alpha_{\rm high}$
Quaia slices, best fit at the fitted $\alpha_{\rm high}$
CC+SN+CatWISE+Quaia: minimum, 68% and 95% regions
joint χ^2 minimum ($\Delta\chi^2 = -0.80$ vs ΛCDM, $\pm1\sigma$)
$\chi^2_{\rm min}+1$
$\chi^2_{\rm min}+2$
$\chi^2_{\rm min}+4$
Observer sector $\vartheta_{\rm obs}$ [deg]
Present time t_0
$\log_{10}\mathcal{M}$ (band mismatch; lower is better)
